

High Fidelity

Splitlicious designed for iOS

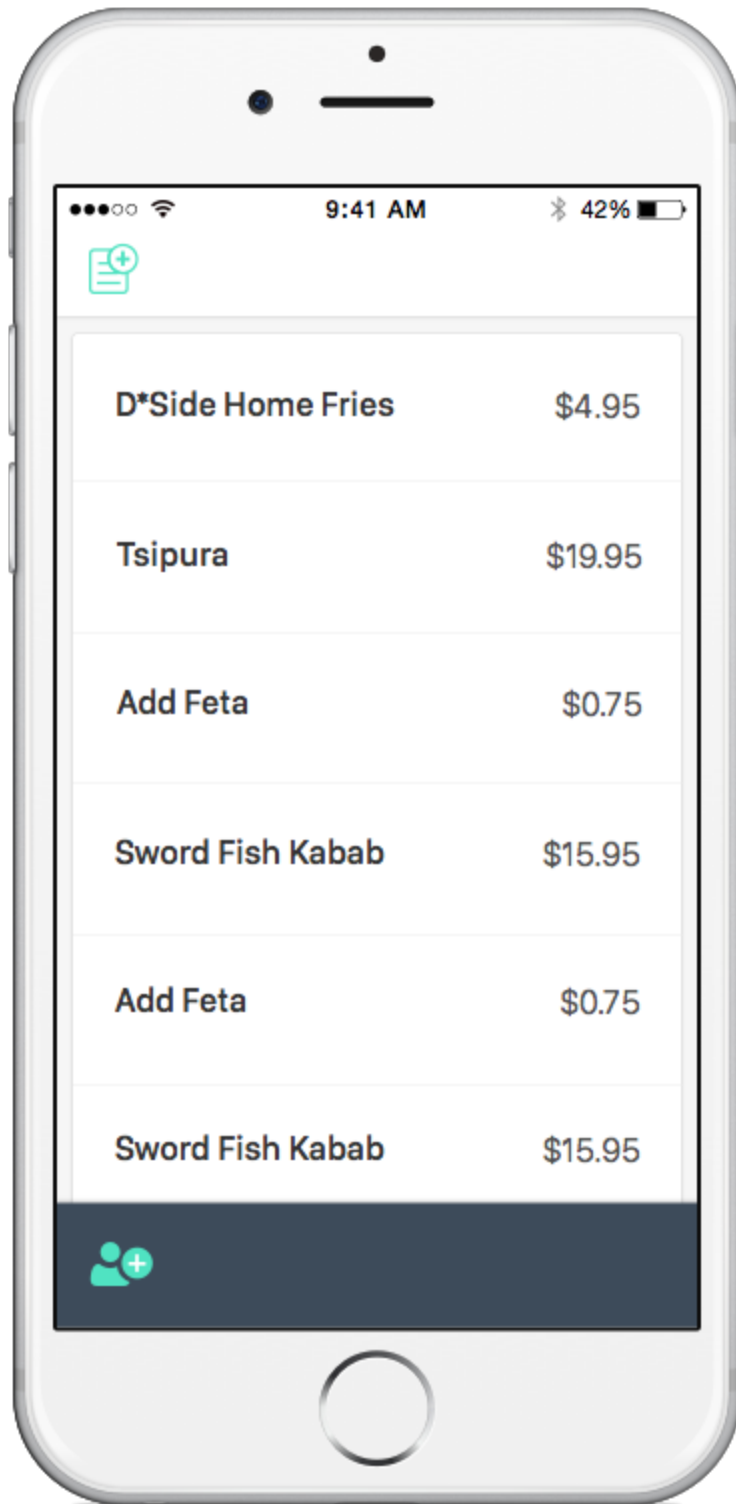

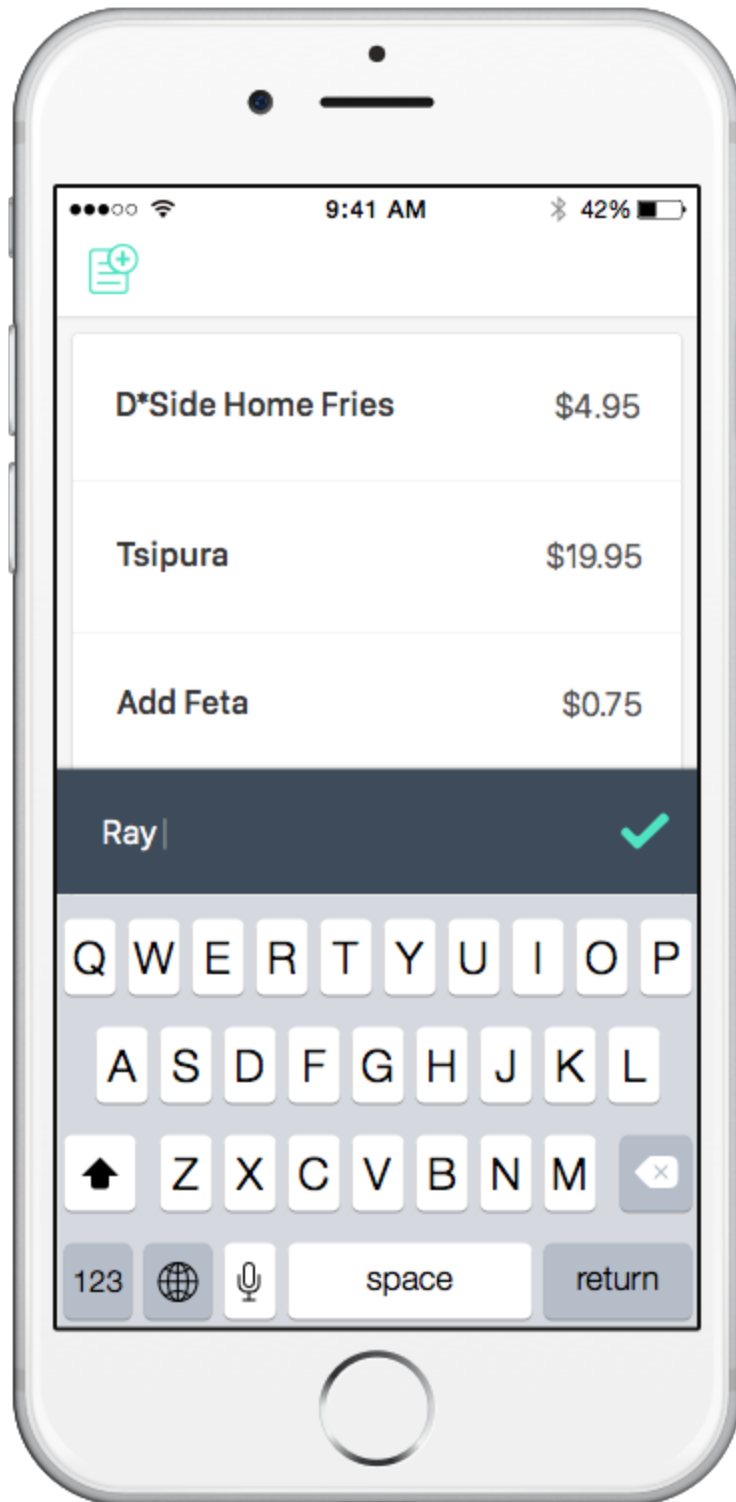

1. Take a photo of the bill.

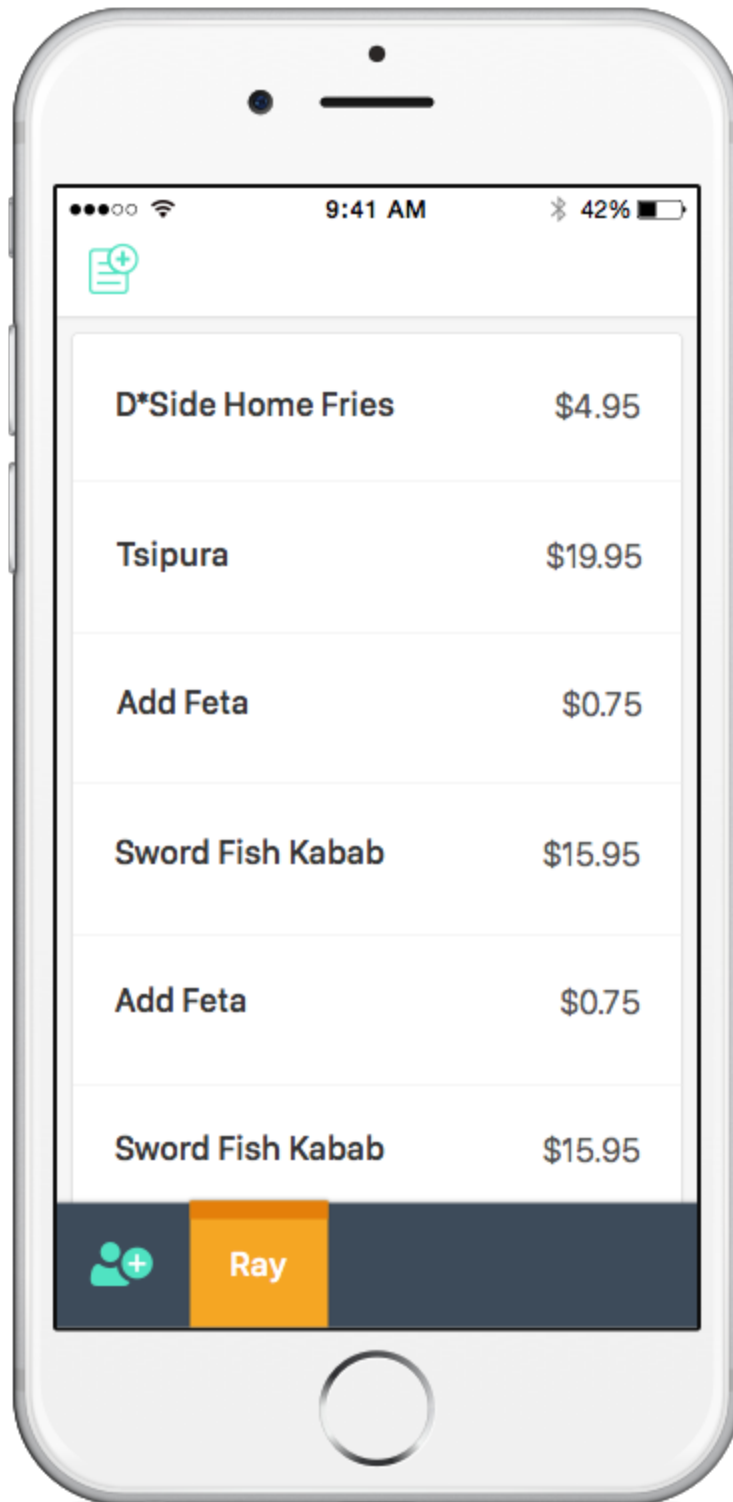

2. Confirm photo to upload.

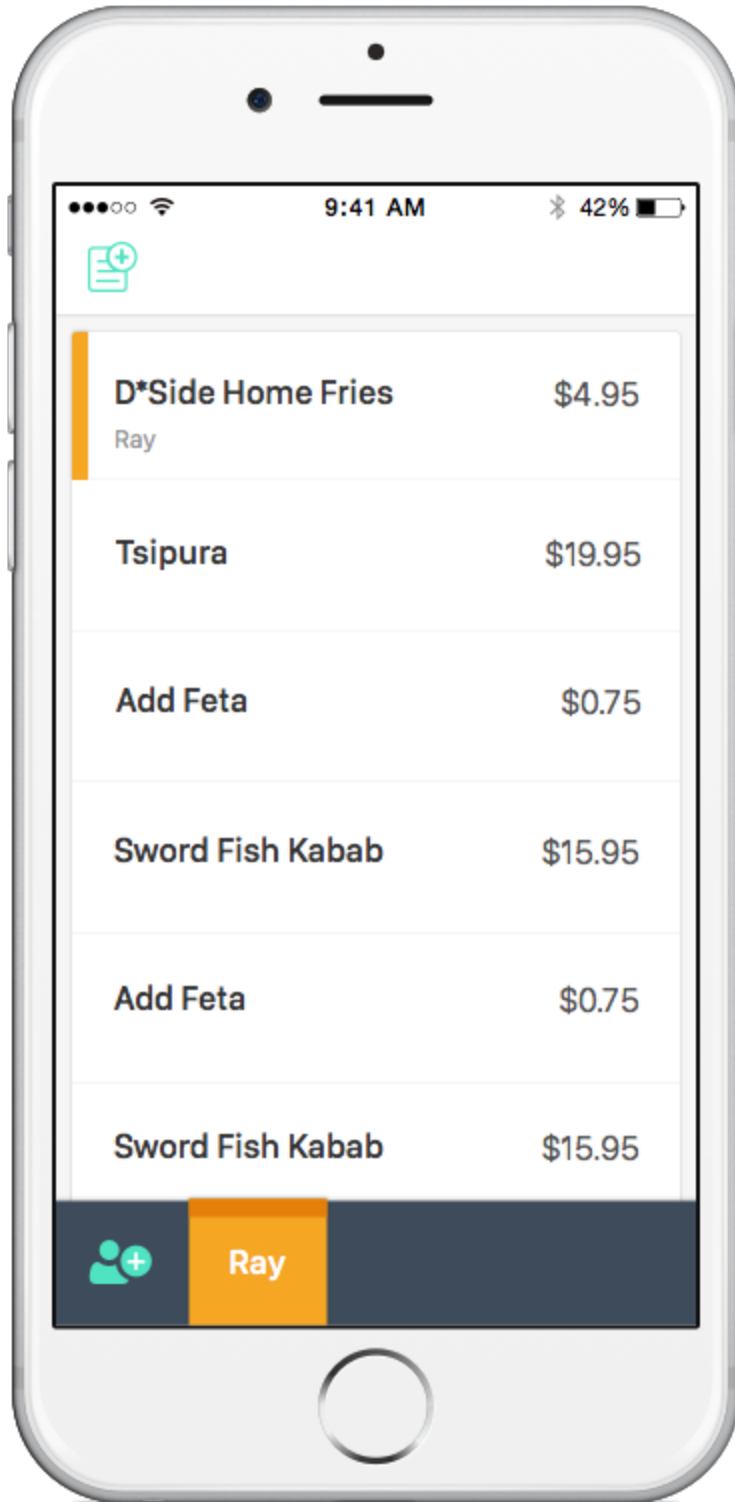

3. Using OCR, the bill is itemized. The user can create a new bill or add someone who is paying.

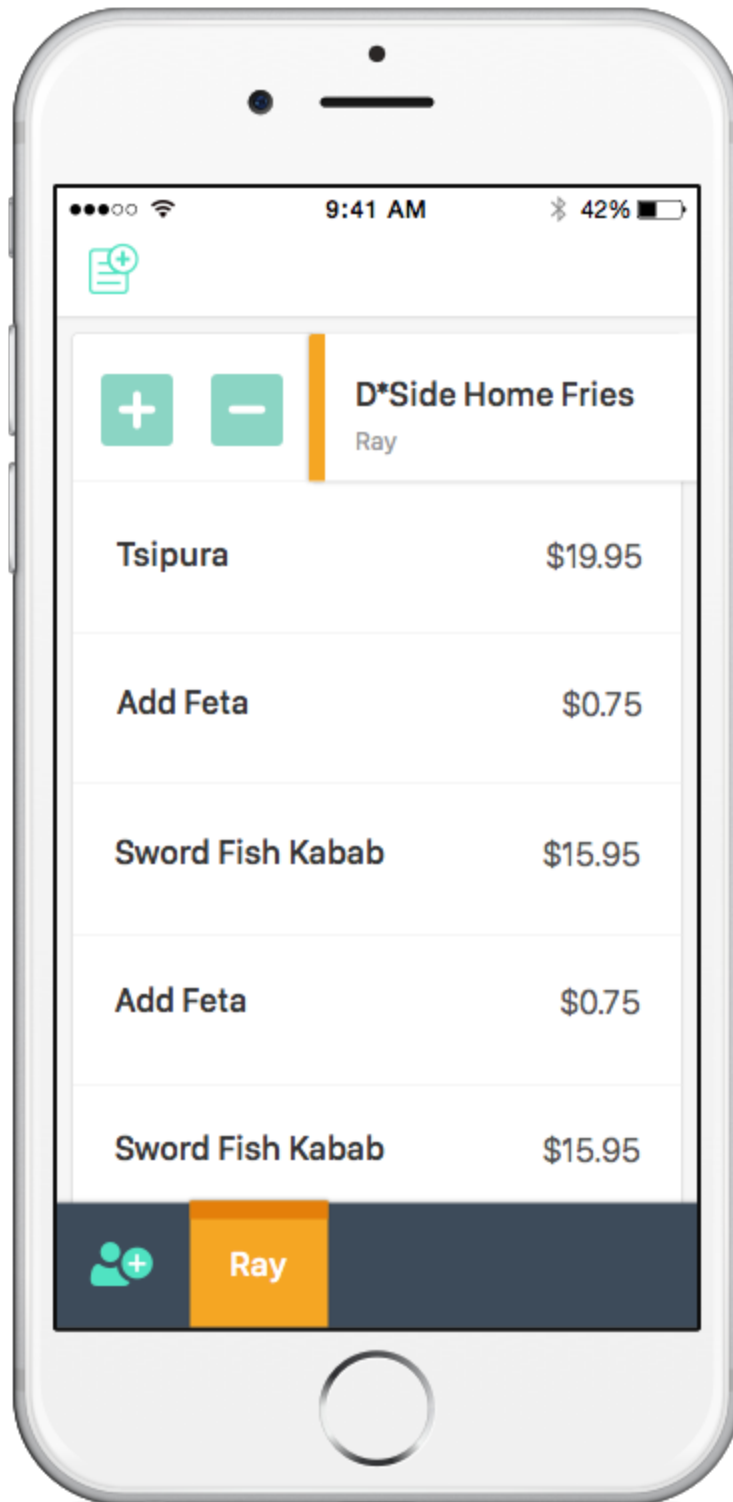

4. Adding a person is simple.

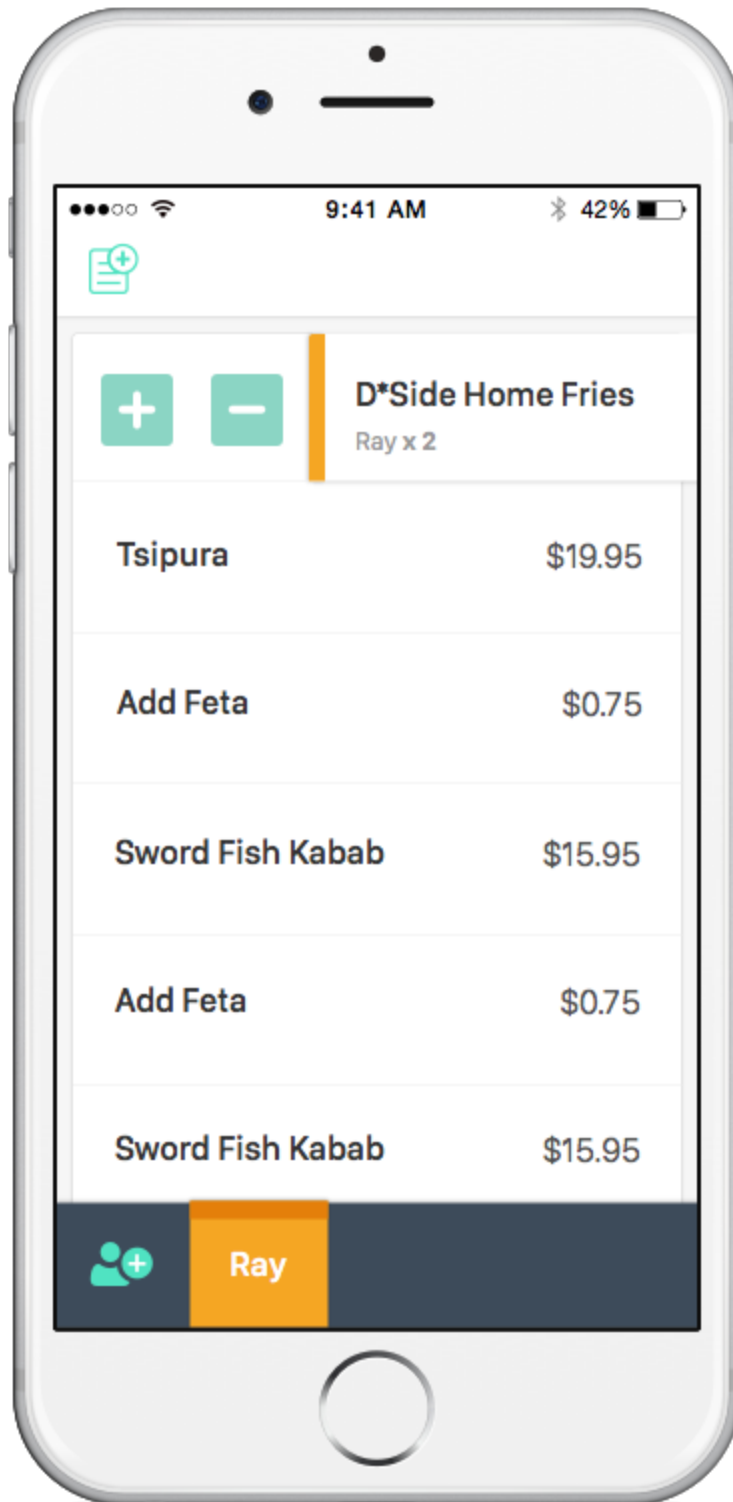

5. Once added, this person can claim items from the bill.

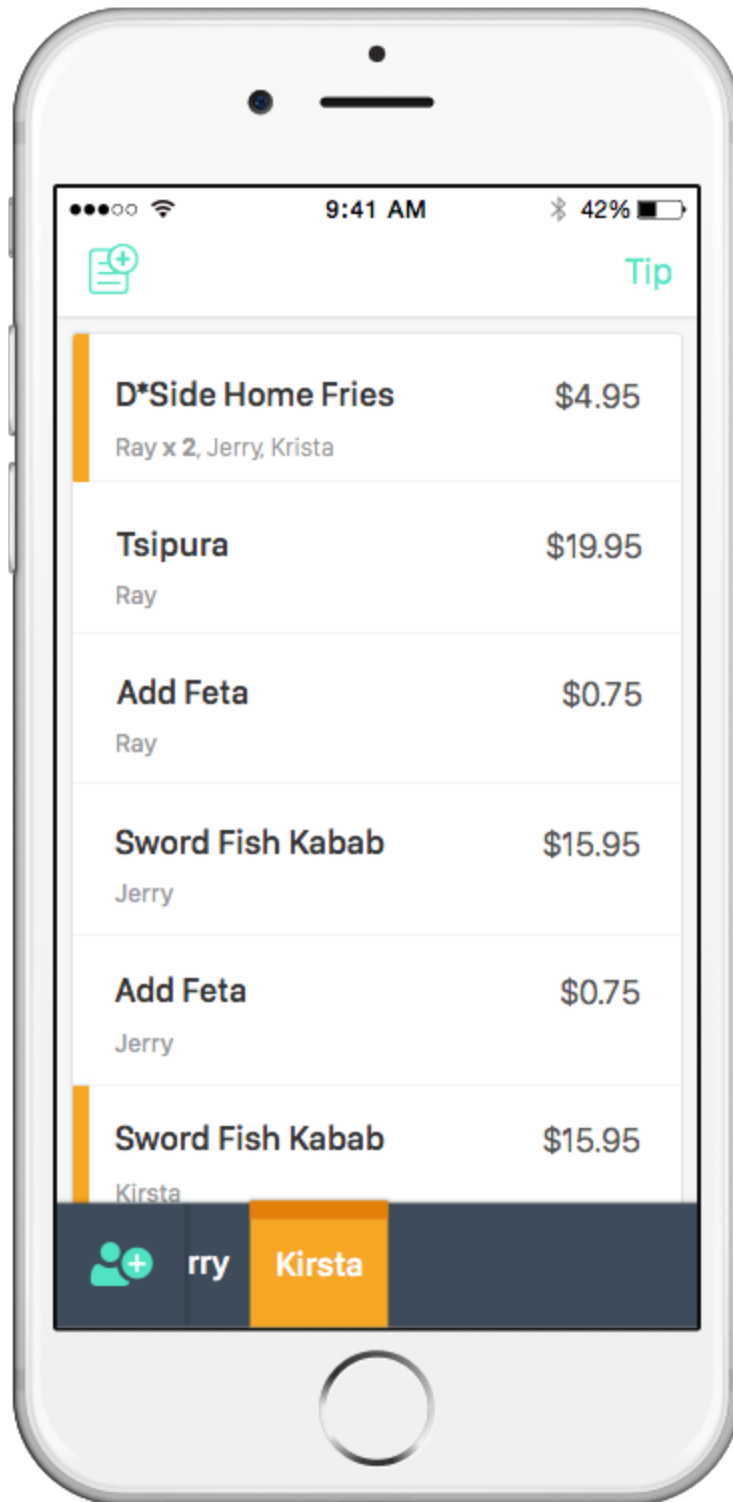

6. Claimed items are clearly marked.

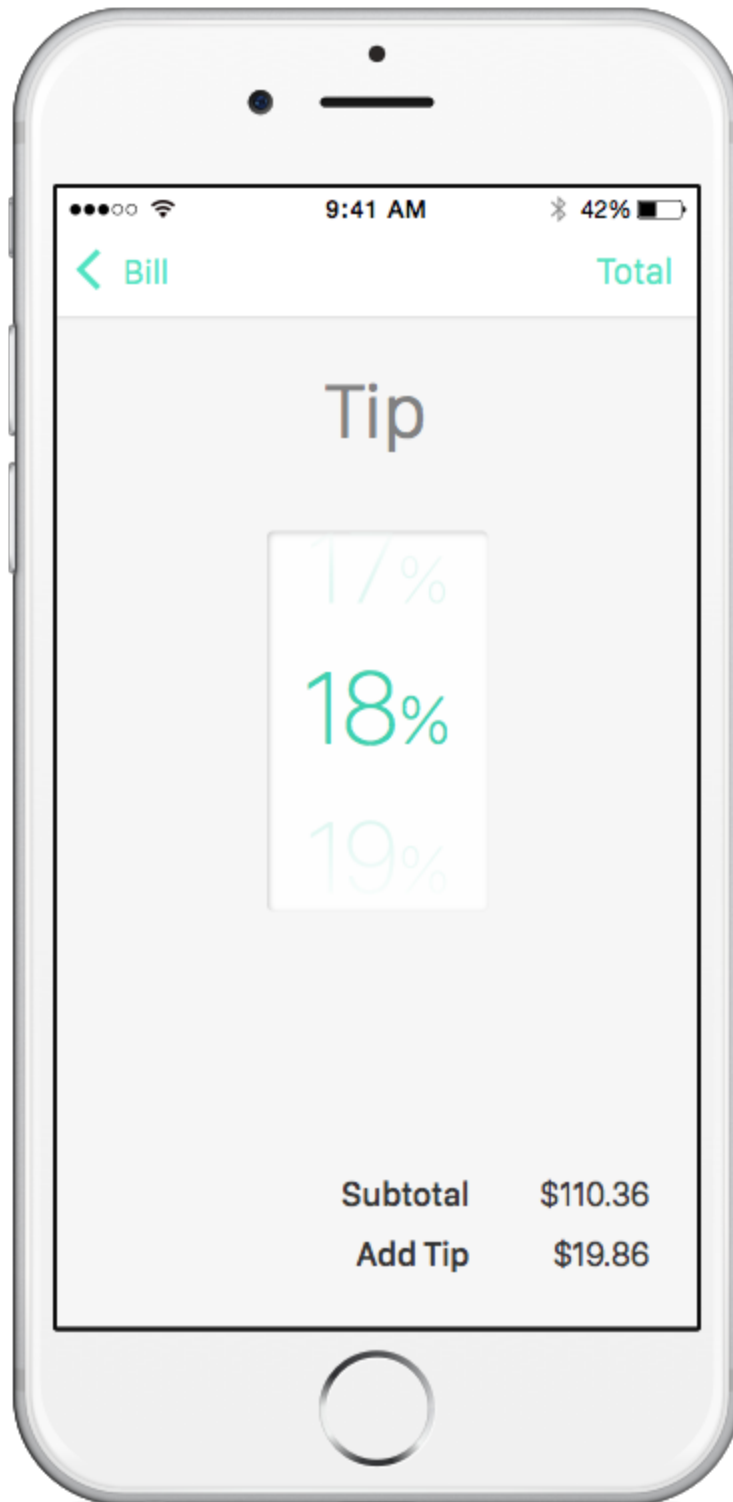

7. Swipe an item right to reveal options for adding more shares. This works for those rare occasions when two or more people share.

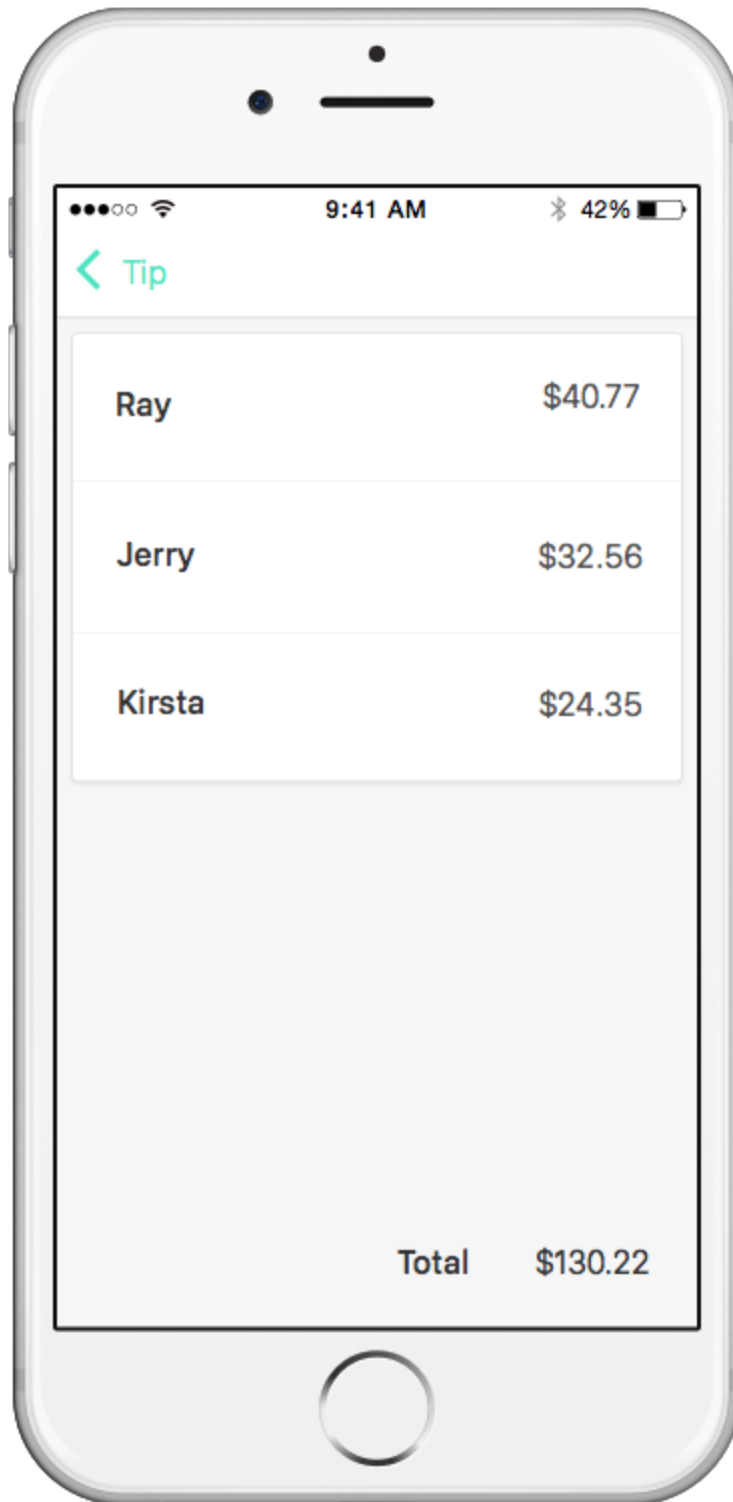

8. Shares are denoted next to the name with “x 2”.

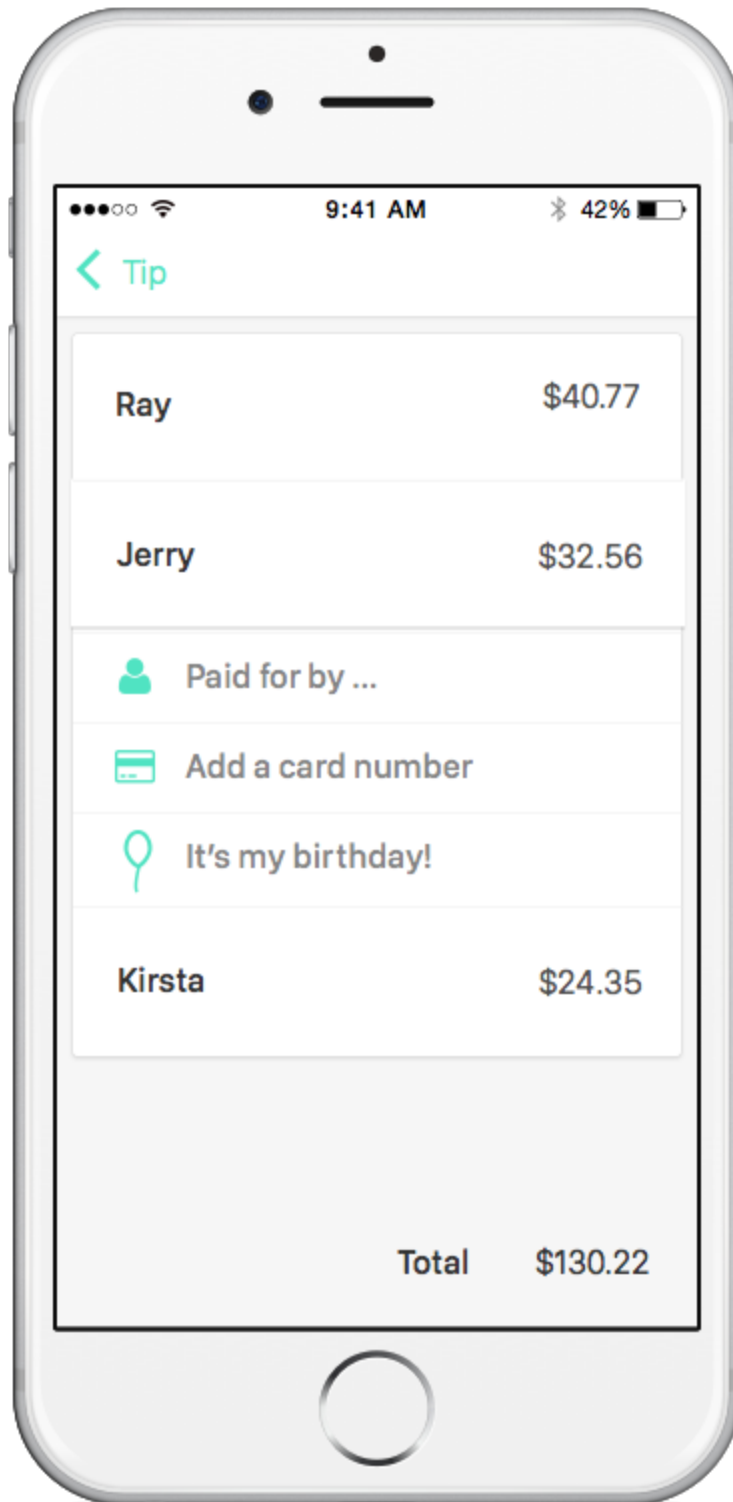

9. Once all the items are claimed, an option to Tip is shown.

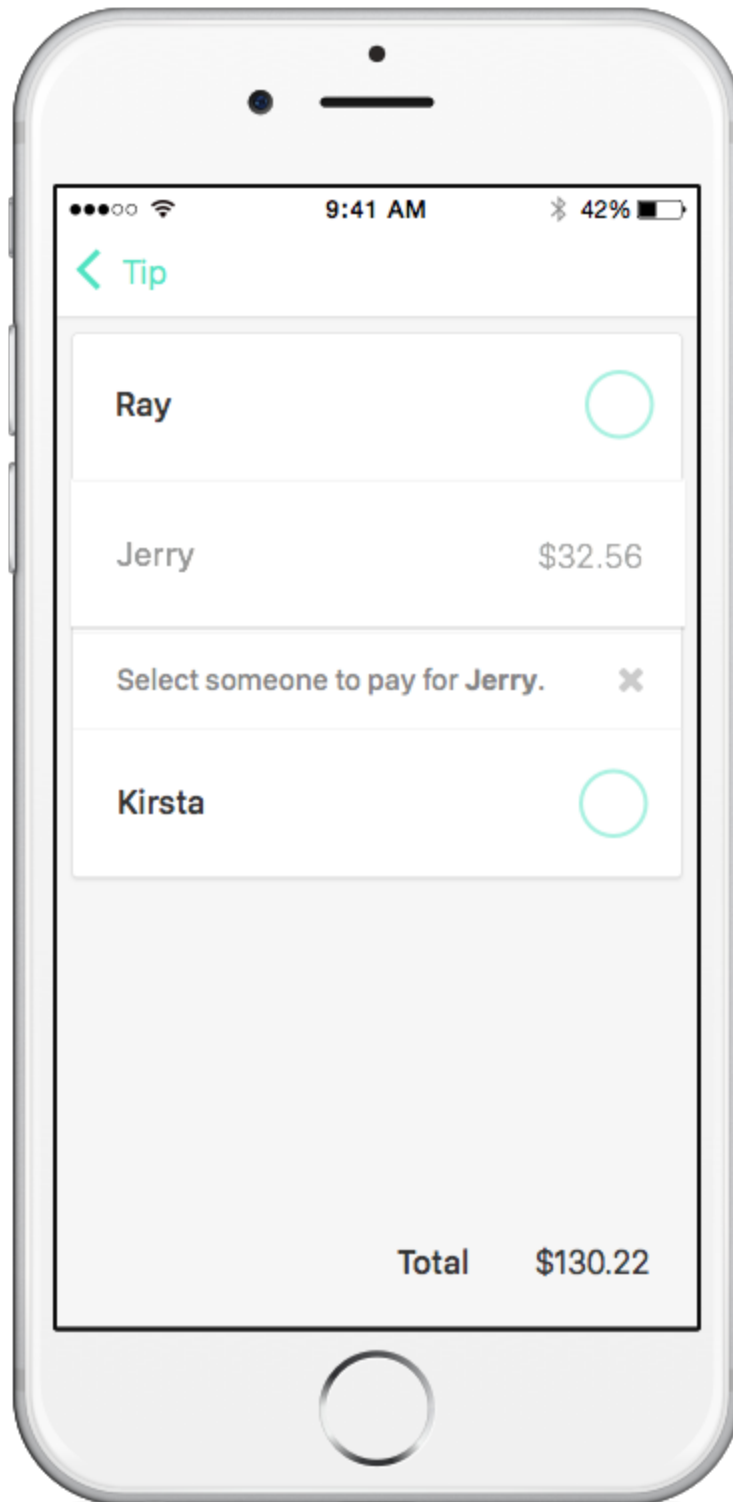

10. Adding a tip requires no calculation — the user only needs to select a percentage.

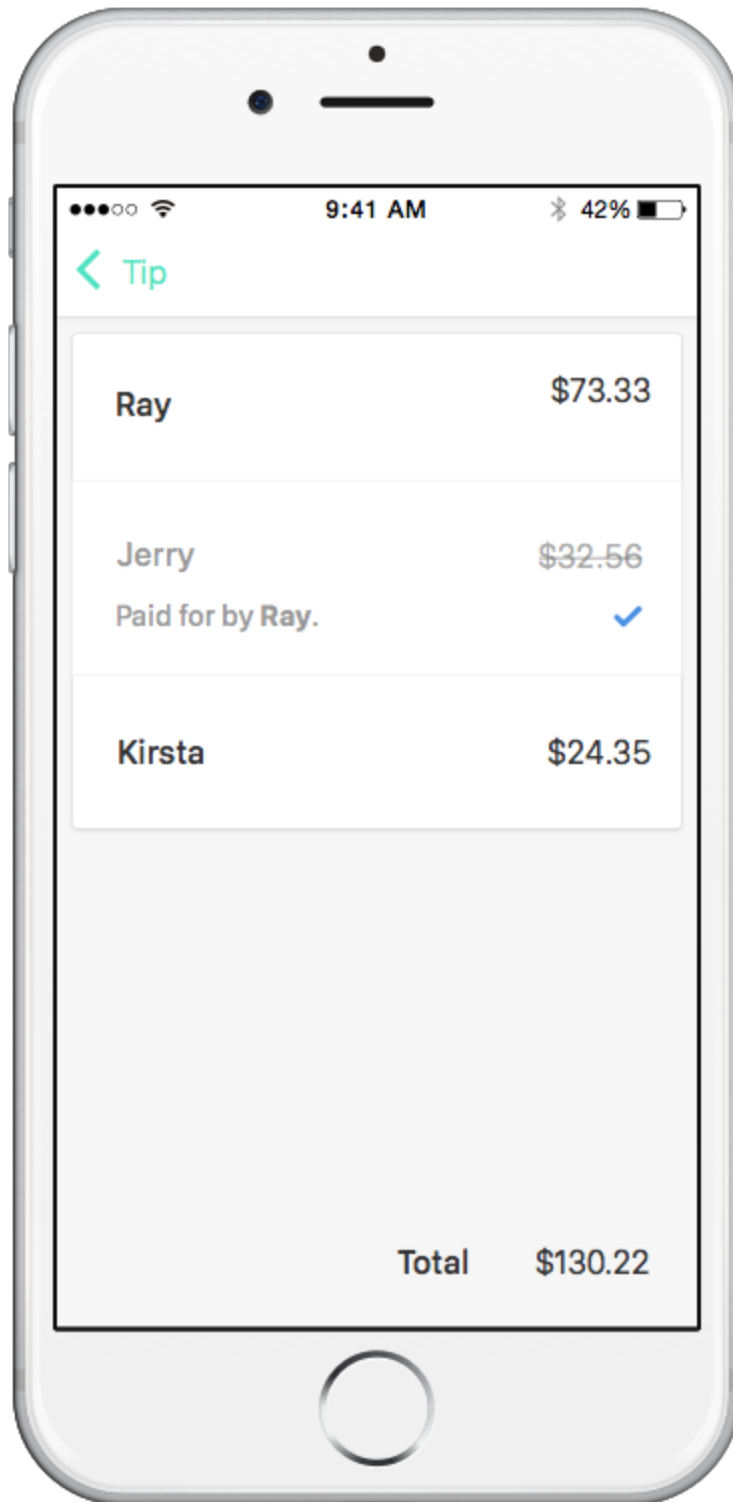

11. After tip, totals are shown for each party member.

12. Tapping on a member gives more options to: have someone else pay, add a card number, or note a birthday.

13. Options are shown to select someone to pay for someone else.

14. If a person is paid for by someone else, that is updated in the bill.
